

BICYCLE PACK

ABSTRACT OF THE DISCLOSURE

The present invention comprises a carrier bag for attachment to the handlebars of a bicycle, including a panel. The panel has a first axis and a second axis. The second axis is perpendicular to the first axis and intersects the first axis at an intersection point to define, a right segment of the first axis and a left segment of the first axis, and to define a forward segment of the second axis and an after segment of the second axis. A right bar strap is attached to the panel on the right segment and spaced apart from the intersection point. A left bar strap is attached to the panel on the left segment and spaced apart a suitable distance from the intersection point. A stem strap is attached to the panel on the after segment and spaced apart from the intersection point and configured to encircle a stem cylinder.
